

ACC-IOX-RELAY

Verkada Security Relay

Overview

The Verkada Security Relay simplifies intercom and access control installations by providing direct power to lock hardware, eliminating the need for an external power supply when devices are configured as door controllers. By moving sensitive circuitry to the secure interior side of the door, the security relay also protects against tampering and unauthorized entry if the exterior device is damaged.

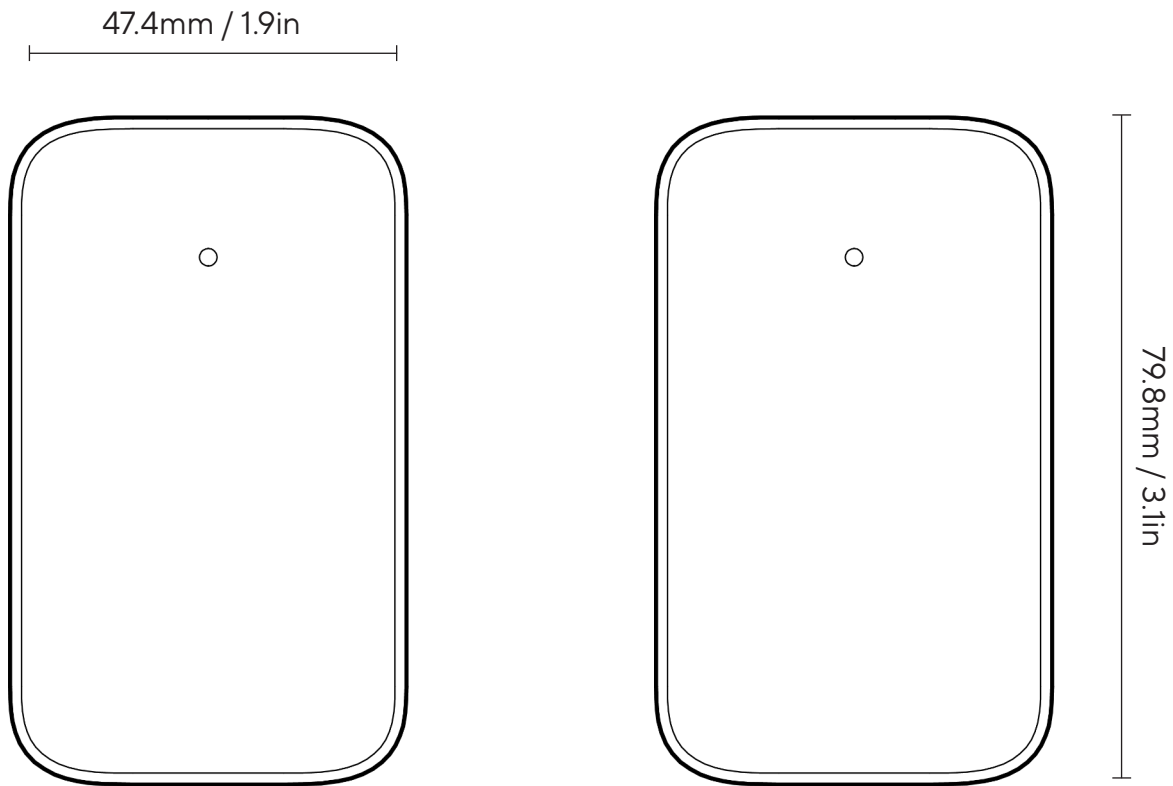

The security relay is compatible with all Verkada intercoms and the AF64 Access Station Pro.
