

## Cybersecurity principles

### Cloud Based Access Control

At Verkada, we know it's mission critical to keep your data secret and safe. We're dedicated to creating a peerlessly secure, modern surveillance solution.

#### Security is ever evolving

As security threats evolve and adapt, so too, must organizations' response to them. That's why Verkada releases automatic updates to its firmware and software. These updates and security enhancements protect you and your critical data from known and emerging threats.

#### Secure mobile integration

The Verkada Pass mobile app allows users to unlock doors using their iOS or Android device as a digital key card. Access from Verkada Pass is encrypted and protected by multiple layers of authentication including single sign-on and 2-factor authentication.

#### Protect your data's journey

Whether data is at rest, in transit, or stored in the cloud, it's important to ensure that right protocols are enforced to keep data safe. All Verkada systems feature industry-leading data security standards, enabled automatically with no configurations required.

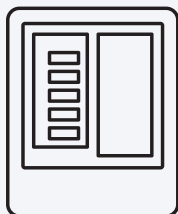

### Trusted by

EQUINOX

## Verkada's cloud-based Access Control

#### Hardware reconsidered

Redesigned control panel that can be used with existing card readers

#### Easy to scale

No servers, databases, or on-prem clients to manage — simply just plug in and add doors

#### Centralized management

Modern platform enables secure access on any device from anywhere in the world
