Protect Your Childcare Centre with Verkada

Overview

Verkada helps childcare centres create safer environments for children and staff with cloud-based video security, controlled entry, and tools that support privacy, accountability, and compliance. From verifying visitor identities to quickly resolving incidents, our platform empowers centre leaders to maintain security and peace of mind.

Key Benefits

Protect Footage with Role-Based Access Controls

Restrict visibility to authorised personnel with strict role-based permissions. Comprehensive audit logs track every access event, helping centre leaders maintain accountability and comply with privacy standards.

Get Notified About Mobile Phone Usage

Leverage AI-powered video analytics to detect mobile phone use on-site. Receive real-time alerts and quickly search and review footage, allowing staff to address concerns swiftly and maintain focus on childcare best practices.

Simplify Incident Reporting

Locate, clip, and share footage within seconds. Build comprehensive incident timelines with unlimited archival footage, watermarked timestamps, and secure links—no downloads or manual stitching required.

Safer Pickups and Visitor Check-Ins

Verify visitor identities at entry with Verkada's Intercom and Guest systems:

- Confirm parents or guardians during pickup.
- Screen visitors against custom banned lists.
- Get instant alerts when a person of interest is detected for proactive response.

Safeguard Privacy with Face Blur

Verkada's Face Blur tools help centres protect sensitive footage:

- Live Face Blur: Automatically obscures faces in real-time streams for private yet effective monitoring.
- Archive Blurring: Selectively blur faces before sharing footage with parents, staff, or authorities to protect privacy while preserving evidence.

Fast, Scalable Deployment

Verkada cameras are plug-and-play, automatically configuring over PoE. Add devices easily without replacing central hardware. For sites with legacy cameras, Command Connector unifies systems under one platform, eliminating costly rip-and-replace upgrades.

Enterprise-Grade Security and Compliance

Footage is encrypted at rest and in transit. Verkada meets global standards for data protection and privacy, giving centres confidence their systems are secure. Learn more at **verkada.com/trust**.

Recommended Solutions

Video Security

AI-enabled cameras with secure, cloud-based storage for 24/7 monitoring and incident resolution.
Video Intercom

See, speak with, and verify visitors before granting access to your facility.

Guest Management

Screen visitors, manage pickups, and maintain digital visitor logs for compliance.

Access Control

Easily manage doors and permissions remotely to keep unauthorised visitors out.

Kedleston Group

"We can review an incident and get a snapshot at the click of a button. The footage is clear, watermarked and date-stamped, so we can supply it to the police if necessary and make it legally admissible as evidence."

Chris Kennedy
Development and Estates Manager, Kedleston Group
