

Intercom for

# Manufacturing & Logistics

## Overview

Verkada Intercom empowers manufacturing and logistics organizations to answer calls for entry and aid faster and more effectively. Gated entry protects high value assets from theft, while cloud-based call routing expedites driver entry and reduces backlogs. In Verkada Command, organizations can centrally track all entry and exit events across sites for compliance purposes. And with IP66/IK08 ratings, the TD53 and TD63 intercoms can withstand harsh conditions and impact in exposed environments.

## Use Cases

### Entry management

Visually verify visitors and drivers, communicate with two-way audio, and remotely unlock gates and doors for secure and seamless entry.

### Call for aid

Enhance worker safety and efficiency with calls for technical assistance or medical help in case of spills, equipment malfunctions, and more.

## Trusted by Manufacturing & Logistics Organizations

“

“The container ID numbers are the heartbeat of logistics. Everything moves in them, and there’s often a need to review camera footage to pinpoint exactly when a container arrived and left the facility.”

**LYNX****Francisco Garcia,**

President and Founder  
Lynx Logistics

## Key Features

### Clear audio, sharp video

With adaptive beamforming, AI-powered noise suppression, and a wideband codec, receivers can clearly hear intercom callers in noisy environments.

### Flexible call routing

With dynamic call routing, enable SOC teams to remotely field calls across sites, or let guards answer calls from the field via mobile.

### In-call LPOI and POI\* alerts

Deny entry to banned drivers and vehicles using facial and license plate recognition paired with real-time alerts during intercom calls.

### Enterprise insights

Centrally log all call events across sites, and access detailed dashboards, events reporting, proactive alerts, and more.

## Where to Install?

- Vehicle Gates
- Warehouse Aisles
- Loading Docks
- Building Entrances
- Production Floors
- Secured Zones

With cloud-based call routing and multiple receiver options - Verkada Desk Station, Verkada Command on web, Verkada Pass app, Verkada Command mobile app, and existing communication systems - organizations can take calls from anywhere and boost response rates. All Verkada receivers support video feeds from intercom and context cameras as well as one-tap controls.

## One Integrated Cloud-Based Platform

### Video Security

Pair eye-level intercom cameras with neighboring context cameras for comprehensive visual context.

### Access Control

Facilitate seamless staff entry using the intercom's built-in badge reader and door controller.

### Guest

For end-to-end visitor management, grant entry with intercoms and provide a frictionless sign-in experience and digital log with Guest.
