

Verkada Guest for Healthcare

Simplify Visitor Management With EMR Integration

Verkada Guest enables healthcare organizations to streamline visitor check-in, protect patients and staff, and know precisely who is in their facilities– all while respecting patient privacy.

Key benefits

Simplify front desk operations

Surface relevant patient information like room number from your EMR system when checking in a visitor. Print custom badges in one click and automatically notify nurses about the visitor.

Protect patients and staff

Prevent incidents by screening visitors against patient-specific and site-wide approve/deny lists as well as known offender databases if desired.

Enforce visitation limits

When checking in a visitor, staff can see how many visitors are currently with the patient, allowing the front desk to enforce visitor limit policies.

Add checkpoints at restricted units

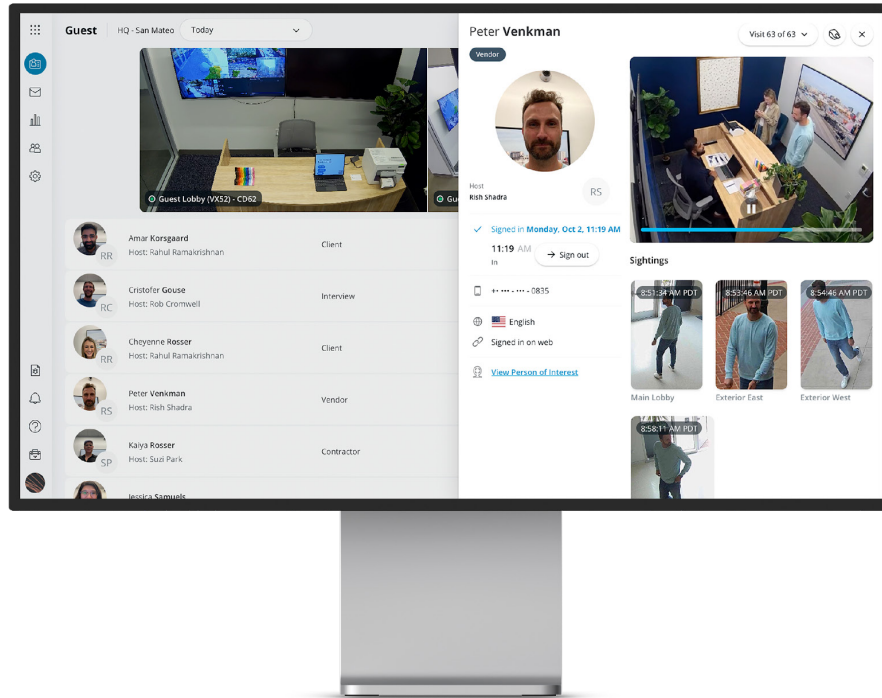

See incoming visitors who have checked in at the front desk, and quickly verify their identity by scanning their ID or badge QR code upon arrival.

Know precisely who is on site

Retain detailed visitor logs that include headshots, information collected during sign-in, and footage of each visitor across all your Verkada cameras.

Quickly check in returning visitors

Same-day returning visitors can instantly sign in by scanning their badge QR code on the iPad, saving time for both them and your staff.
