

AI-Powered Security That Is Intelligent, Proactive, and Scalable

Is your facility security giving you real control, or just more systems to manage? With Verkada, move to a unified platform that brings together cameras, alarms, access control, intercoms, and visitor management. Stay ahead of threats with proactive AI detection while unlocking operational value beyond traditional security.

Trusted by Top Manufacturers

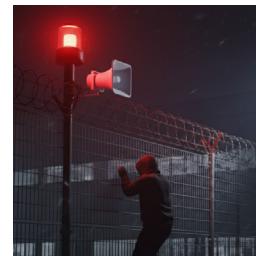

Work Smarter, Not Harder with AI-Powered Security

Perimeter intrusion detection

Immediately alert when someone is detected climbing a fence, crossing a virtual boundary, or loitering — protecting against thefts and trespassing with AI.

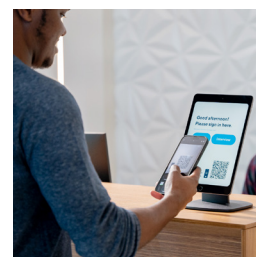

Virtual guarding with AI talk down

Cameras can detect intruders after hours and trigger alarms. Horn speakers deliver AI-powered talk downs to scare off trespassers before escalation to human agents.

Automated gate security

Verify visitors and contractors with a video intercom before granting entry, while license plate recognition gives approved vehicles automatic access — no onsite guard required.

Visitor and contractor security

Streamline visitor check-in with automatic photo ID capture, badge printing, and e-signing, while automatically flagging anyone on site-specific deny lists.

Unauthorized plant access

Get instant alerts with video context for tailgating, forced entry, or attempts with expired badges. Additionally, deter credential sharing with anti-passback.

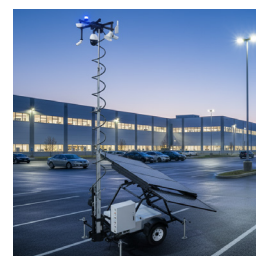

Unknown person detection

Identify strangers or unknown personnel in highly sensitive areas like production floors or restricted labs to protect assets and operations.

Onsite active threats

Whether it's a disgruntled former employee or an armed threat, teams can quickly access footage, initiate lockdowns, and coordinate response using live floorplans.

Remote monitoring

Monitor remote yards and facilities with Verkada cameras featuring built-in LTE and optional solar power — deployable as a mobile trailer or standalone unit.

Detect, Alert, and Resolve Threats Faster with AI

Centralize alerts and response

Easily integrate security alerts into your existing workflows — or manage them directly in Verkada using a ticket-based system that lets your team track, investigate, and resolve incidents across sites.

Rapidly investigate with AI

Quickly investigate incidents or security threats in real time using license plates, reverse image search, or plain-text queries. Extend Verkada's powerful AI analytics to even non-Verkada cameras.

Reconstruct a timeline of events, instantly

No more guessing. Automatically build a timeline of events, showing where a person or vehicle appeared across multiple cameras and on a floorplan.

Stay ahead of known threats

Customize alerts and get immediate SMS or push notifications when a person of interest, like a former employee or known offender, appears at any of your sites.

Simplify video sharing

Instantly share video clips and live feeds without relying on IT or thumb drives. Empower your team to quickly coordinate with plant personnel or local authorities to respond to incidents.

Deliver value beyond security

More than security — Verkada helps detect health and safety risks, automate compliance tasks, streamline quality checks, and increase operational efficiency.

Why Verkada?

Easy multi-site monitoring
from any internet-connected device

Rapid investigation
in minutes, not hours

Built-in automations
for faster incident reporting

Early threat detection
powered by AI

Instant alerts with video context
for faster response

Reduction in guard costs
through smarter alternatives

Remote deployments
via LTE, Starlink, and solar power

Unlimited cloud archiving
and user seats

No NVRs or DVRs
— up to 365 days of on-camera storage

Up to 10-year warranty
and predictable renewal costs

Connect with us for a custom quote, consultation, or free 30-day product trial.

Our team will work with you and everyone involved to find the right solution for your security goals and beyond.
