

# Deploy Verkada Security Anytime, Anywhere

with the MT81 Cloud-Managed Security Trailer

## Key benefits

### Deploy the full power of Verkada’s AI-powered cameras

Configure each trailer with up to six cameras, such as PTZs and multisensors for wide coverage and bullet cameras for advanced ALPR. Leverage AI to expand deterrence, alerting, and investigation capabilities.

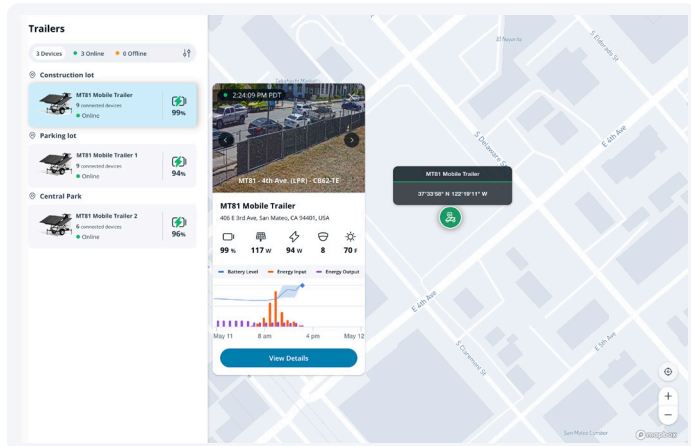

### Unify all operations in one cloud-based platform

Manage fixed and mobile deployments in one platform. View your entire fleet on a map, get proactive security and health alerts, troubleshoot power and network issues, and run investigations.

### Prevent coverage loss with remote power management

Get low-power alerts before coverage drops, shut off non-critical devices remotely, and see full power data — so cameras stay live without a site visit.

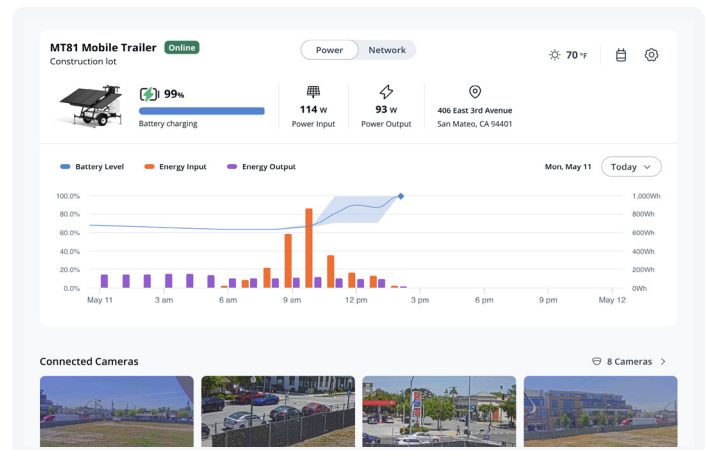

## Remote management made easy

See each trailer’s real-time GPS location, confirm the site with footage snapshots, and review power metrics for a quick health check

## Platform capabilities

- **Detect and deter crime with video alarms**, which identify unusual activity, trigger AI-powered deterrence and agent monitoring, notify your team, and dispatch police.
- **Find footage fast** using AI search tools, including freeform text descriptions and attribute filters for people and vehicles.
- **Proactively monitor your site** with automated alerts, such as for POI, license plates, loitering, and fence climbing.
- **See more with PTZ Sentry Mode**, which automatically tracks and zooms in on people in view, like a live operator.
- **Access trailer management and footage** on the go from any device through a simple, intuitive interface.
- **Monitor, manage, and control power and connectivity**, for your entire fleet in Command, our cloud-based dashboard.

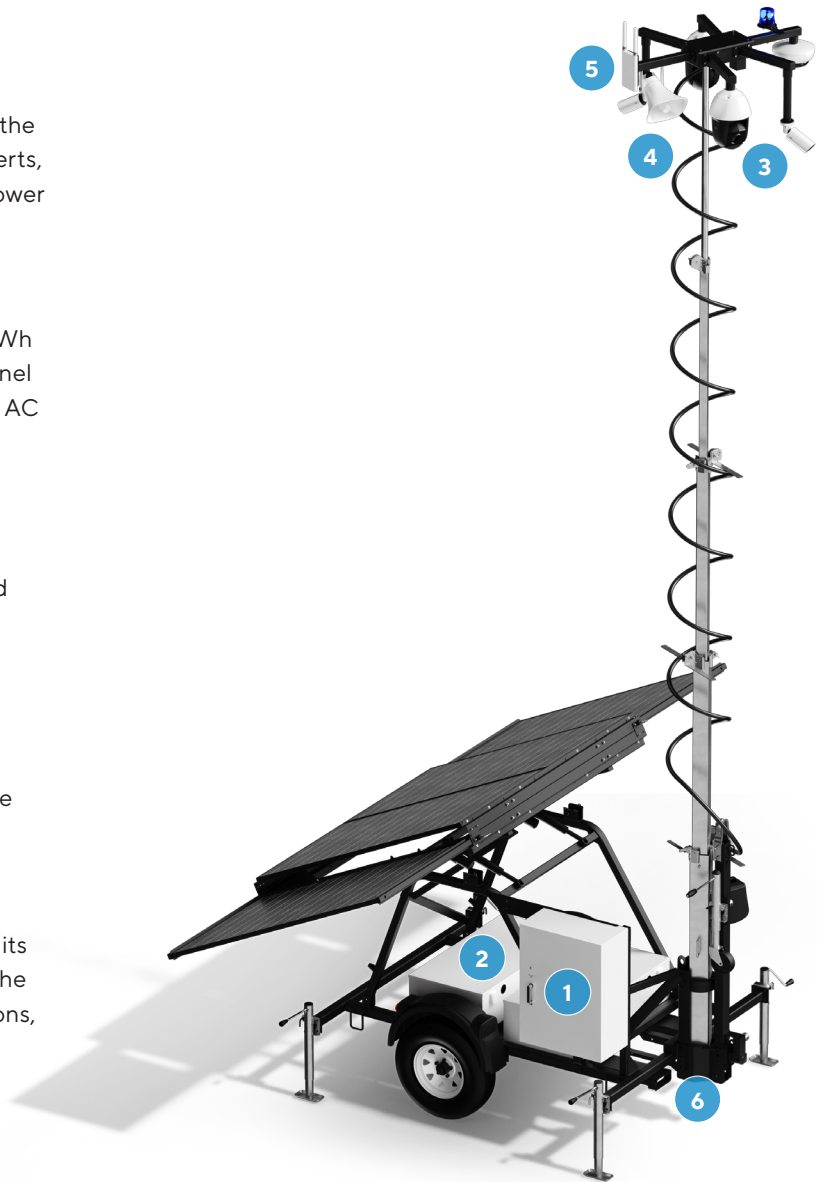

Monitor live and historical power usage, open each camera view, turn off devices to conserve power, and power cycle them to resolve issues.

## Key features

- 1 Verkada trailer controller (VTC)**  
The VTC facilitates communication between the trailer and Command, enabling low-power alerts, remote device shut-off, power cycling, and power data visibility.
- 2 Power system**  
Choose between the 6.6 kWh battery or 13 kWh battery model. Powered by a 1600W solar panel to maximize uptime and rechargeable via any AC shore power source.
- 3 Verkada cameras**  
Deploy up to six Verkada cameras. Simple to install with the MT81's built-in PoE switch, and pre-wired, Verkada-compatible arm mounts.
- 4 BZ11 Horn Speaker**  
Use the BZ11 for two-way talk-down or AI-powered deterrence that escalates warnings based on camera-detected activity and visible details.
- 5 GC31-E Cellular Gateway**  
Provides cloud connectivity to the trailer and its devices, with remote troubleshooting tools. The GW31-E Wi-Fi Gateway and third-party options, such as Starlink, are also supported.
- 6 Built-to-last**  
The MT81 is American-made and engineered for long-term reliability, with a 5-year warranty to match.

## Design your trailer

Customize your trailer with up to six Verkada devices, or for the easy-button, choose one of our Verkada-validated configurations (VVCs). Use our [configurator](#) to estimate uptime and cost based on your deployment location, devices, and trailer model.

### VVC 1

Core security needs

- 2 PTZ cameras
- 1 fisheye camera
- 1 horn speaker
- 1 cellular gateway

### VVC 1

Zero-compromise security

- 2 PTZ cameras
- 2 bullet cameras
- 1 four-camera multisensor
- 1 horn speaker
- 1 cellular gateway
