

Reduce false alarms and easily manage multiple retail locations with Verkada's cloud-based security platform

Whether it's employee theft, fraud or shoplifting, retail crime impacts profit margins and puts employees and consumers at risk. Verkada's Monitored Alarms utilizes the entire Verkada security platform – Verkada cameras, doors and sensors – to enable retailers to swiftly detect and respond to threats.

Installed to detect important events such as motion, an open door, a broken window or attempted access after scheduled hours, a triggered alarm can be configured with a custom response, which can include notifications to your staff or dispatch of the proper authorities.

Key Benefits

Reduce False Alarms with 24/7 Monitoring

Dramatically reduce false alarms and ensure a priority emergency response for confirmed threats. Included with Verkada Alarms are professional monitoring agents, who provide additional video verification to assess incidents and respond in real time. If there's a visible threat, an alarm will be raised and emergency services dispatched.

Wireless and Wired Systems

Verkada offers a suite of wireless intrusion sensors, including door/window, motion, glass break, water leak, and panic buttons. We can also support wired installations with a 32-input + 2-output alarm panel, allowing you to use your existing wired sensors and siren/strobe/bell outputs. A cellular backup module with integrated SIM and unlimited data plan attaches to the wireless hub or alarm panel over USB.

Instant Response with Panic Buttons

For active emergencies, trigger a panic button to dispatch emergency personnel, lockdown the building, or other actions. Administrators can customize the response for each panic button based on the emergency scenario and location. Mount the wireless panic button from anywhere, such as a mobile device, desk or wall.

Multiple Locations, One View

Manage all your retail locations from any device anywhere in the world. From Command, our cloud-based web platform and mobile app, users can arm/ disarm locations and configure all alarm settings – including trigger events and response actions for each location.

Beyond the Keypad

The Verkada Alarm Console goes beyond the traditional keypad with an integrated camera, live-streaming, two-way video, and custom audio alerts. In addition to arming/disarming, use the Alarm Console to see video from your cameras, check status of all sensors, and raise a panic alarm. Admins can view live and historical video and make calls down to the Console to address staff, visitors, or intruders.

Key Features

- Intrusion detection that utilizes Verkada cameras, doors and sensors.
- Support for wired and wireless sensors as well as backup cellular connectivity.
- Built-in 24/7 professional monitoring provided by trained operators.
- Alarm Console with keypad, integrated camera, and talk-down.
- Cloud-managed with easy configuration of alarm triggers and responses.
- 10-year warranty on all hardware.
