

## Sound Systems

# Try Sound Systems for free

### Overview

Verkada Sound Systems is a cloud-managed audio management solution built for enterprise scale, offering a single pane of glass to manage hardware, software, and commercially licensed music streaming. Leveraging Command, Verkada's cloud-based management platform, organizations can seamlessly handle everything from everyday ambient music to instant announcements. Through a native integration with Soundtrack, users can effortlessly stream commercially licensed music directly from Command, without worrying about external media players. Command also centralizes end-to-end diagnostics and system controls, allowing administrators to configure spaces and zones, adjust volumes, and instantly verify device health across a global footprint.

Whether bridging existing amplifiers and speakers to the cloud with Verkada Network Audio Players or deploying Verkada Network Speakers, organizations can trial the full platform for 30 days at no cost, with brand-new hardware shipped free both ways.

### Sound Systems hardware overview

Sound Systems has two different sets of product offerings: network audio players and network speakers. Network audio players connect third-party speakers and amplifiers to the cloud, enabling companies with existing audio setups to reap the benefits of Sound Systems without a full rip-and-replace. Network speakers are ready-to-go out of the box, requiring no additional hardware for your audio setup. Both are fully managed from Verkada Command.

| Network speakers                                                                                                          | Network audio players                                                                  |
|---------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| Install effortlessly – no external amplifiers or complex racks needed.                                                    | Bridge non-Verkada audio systems to Command                                            |
| Harness the full power of Verkada Sound Systems, including real-time diagnostics for any audio device in your deployment. | Bring existing audio setups directly into Command for unified, cloud-based management. |
| Choose from compact, in-ceiling, or outdoor models                                                                        | Choose from two-channel and 16-channel models                                          |

### The 30-day trial includes:

- Brand-new Verkada hardware
- Full access to Verkada's cloud-based Command platform
- Free setup support, US, UK, and Australia-based technical support
- Free shipping both ways

Verkada Sound Systems supports a native integration with Soundtrack, a leading provider of commercially licensed music. Soundtrack trials can be enabled directly in Command.
