

# Streamline Vehicle Entry with Automated Gate Control

## Overview

Verkada simplifies vehicle gate operations with automated entry, real-time visibility, and AI-powered search. From recognizing approved license plates to managing visitor access remotely, our integrated platform helps teams secure sites, reduce delays, and improve oversight — all from a single dashboard.

## Trusted by Leading Enterprises

## Key Benefits

### Automate entry for approved vehicles

Verkada's LPR bullet cameras read license plates in real time to open gates for authorized employees, contractors, and vendors — helping reduce congestion and maintaining a steady flow of traffic.

### Remotely manage intercom calls

Verkada's video intercoms enable operators to clearly see and speak with drivers before granting access. Staff can unlock gates from any supported device, whether stationed at the gatehouse or working remotely.

### Unlock gates with mobile credentials

Eliminate the need for physical badges. With the Verkada Pass mobile app, users can unlock gates or raise barrier arms with a tap on their smartphone — without stepping out of their vehicle.

### Simplify visitor check-ins with temporary digital credentials

Invite guests to sign in before arrival, capturing photo IDs, and issuing one-time mobile credentials via Verkada Guest. For unplanned visits, visitors can call the intercom to request gate access.

### Respond faster with AI-powered vehicle search

Track a vehicle's movement across your site using LPR and context cameras. Quickly search by full or partial license plates or cargo ID to retrace its path or investigate incidents.

### Replace manual logs with real-time records

Every vehicle entry and exit, from license plate reads to intercom unlocks, is automatically documented — no paper logs or manual badge tracking required.

## Recommended Solutions

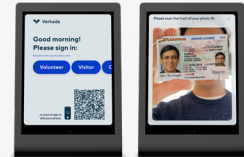

### Bullet Series

Read license plates from up to 98ft / 30m away and trigger automated gate access.

### Video Intercom

Verify identity and control entry remotely with clear two-way audio and sharp video.

### Verkada Guest

Streamline visitor entry with pre-registration and temporary digital access credentials.

### Access Control

Unify vehicle gate access for seamless, site-wide security.

### Gateways

Bring connectivity to cameras or intercoms at remote gates using LTE or Wi-Fi gateways.

## Testimonials

"Using AI-powered search, we can quickly locate each container by its unique ID and know exactly where cargo is in the facility."

#### Francisco Garcia

President and Founder,  
LYNX Logistics

"Not only do we know who they're visiting and their time of entry, we can identify where they've been – and where they could be going."

#### Daniel Sammut

Chief Information Officer,  
IFC Global Logistics & Warehousing

"With Verkada, a guard can effectively oversee multiple areas of the site and respond to critical events, allowing us to maintain high security levels."

#### Kfir Atias

Head of Global Security Operations,
